

## Better Data Management Towards Realizing KUTS

**Thursday, 8 July 2021, Kuching** – In line with upgrading Kuching’s public transportation system, Maltimur’s Kuching Urban Transportation System (“KUTS”) PMC team is attending a series of workshops on Electronic Data Management System (“EDMS”).

EDMS is an integrated system for the creation and management of documents. This system enables better organization of stored documents, keeping track of updates, speeding workflow, improving reliability, and ensures document security.

Other mega projects that have implemented EDMS include MRT1, MRT2, and LRT3 in Klang Valley. KUTS project will adopt the InEight TeamBinder document management system.

The system for KUTS went ‘live’ on 6 July 2021. To prepare future users of the EDMS, a series of training was organized. Training is divided into four sessions: General User Training, EDMS Administrator Training, Review and Approval Training, Forms Training. While available to all, sessions are compulsory across different levels of profession.

Registration is currently available with dates available up to 30 July 2021.

If you have yet to register for a session, you can do so via the link included in today’s MConnects.

Integrating effective systems to manage communication and updates is integral to managing a large project such as KUTS which involves multiple parties. **Do not miss out on this opportunity to familiarize yourself with this collaborative platform!**

Stay tuned for more updates in upcoming MConnects.
